PROJECTS

Document Q&A Chatbot

[Demo Link](#)

Built a RAG based system using LangChain, FAISS, and HuggingFace embeddings to enable context-grounded answers over uploaded PDF documents. Integrated Groq LLMs into the retrieval pipeline and deployed an interactive Streamlit web app allowing real-time, document-specific question answering.

Vehicle Detection & Speed Estimation

[Demo Link](#)

Developed a system to detect vehicles in video streams, track them across frames, and estimate real-time speed. Implemented using Python, OpenCV, YOLOv11 for object detection, SORT for object tracking, and NumPy for speed calculation.

Electricity Demand Prediction

[Github Link](#)

Trained an XGBoost Regressor on five years of historical data, engineering complex temporal and weather features while using a chronological split to prevent data leakage. Deployed a real-time Streamlit predictive web application that forecasts electricity demand with a highly accurate 2.05% average percentage error.

App Builder - AI Agent

[Github Link](#)

Built an AI-powered application builder using LangGraph, LangChain, and Groq LLMs to generate complete projects from natural language inputs. Implemented planner, architect, and coder workflows.

EDUCATION

2023 - 2027 Bachelor's Degree in **CSE** at **The Maharaja Sayajirao University**

SKILLS

Languages	C++, C, JAVA, JavaScript, SQL, Python, HTML5
Fundamentals	Core Java, Oops, DSA, DBMS
Technologies/Frameworks	Numpy, Pandas, Matplotlib, Machine Learning, Scikit-learn, Deep Learning, Tensorflow, Keras, OpenCV, NLP, Langchain, GenAI, RAG, Agentic AI

CODING PLATFORMS

Solved 1000+ Problems on LeetCode

Solved 100+ Problems across platforms like GeeksforGeeks, Atcoder, Codeforces, Cses

CERTIFICATIONS

Mastering Data Structures and Algorithms – PW Skills

Feb 2024 – Dec 2025

Software Engineering Job Simulation – JPMorgan Chase & Co.

Aug 2025
